<b>Description</b> When making a new multiview, the first thing one has to do is select bunches of pages to fill the tendrils. Generally speaking, the pages don't exist yet, nor do the templates. It would make things a lot easier if there were a simple way to actually template the creation of multiviews - i.e. a short form like: Create a new blog 1. Blog Name 2. Blog Template group 3. Press this button  which would create a blog, a blogmultiview, and make all the related pages with the selected templates.

This would probably be appropriately done with custom manager methods on multiview models.
