<b>Description</b>			
<p>Right now, all templates show up in the admin interface for anyone making a page. In the long run, this will be difficult for users because a lot of templates may be one-offs, or only meant for use by people who Know What They're Doing. A couple of solutions come to mind:</p> <ol style="list-style-type: none"><li>1. Order template select box by the number of pages that use each template, descending.</li><li>2. add a field to templates indicating what kind of template they are.</li><li>3. add a field to templates indicating which groups/users have access to them.</li></ol>

Additional thought: Make a contrib app that handles permissioning and display of templates more elegantly via a model, perhaps called TemplateGroup. Essentially it would have a many-to-many to Templates, a many-to-many to Users, and a many-to-many to groups. It would then be incorporated into i.e. PageAdmin to provide a field that only shows Templates that the user has permission to access.
